DISASSEMBLY INSTALLATION

Removal of the cabinet:

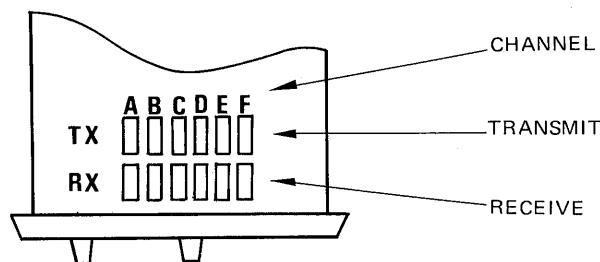

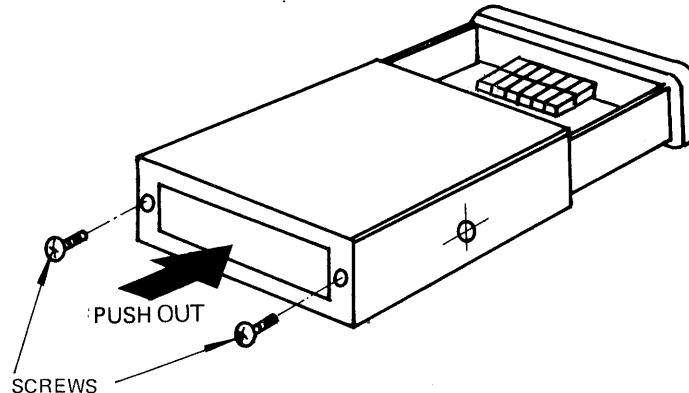

1. Remove the car mounting bracket screws A (one from each side of the unit) and remove the Mounting Bracket as shown.
2. Remove two screws B and pull out the chassis as shown.

CRYSTAL INSTALLATION

Channel 15 (27.135 MHz) is supplied with the unit. Other channels can be operated by installing suitable crystals in the internal crystal sockets. Crystal sockets are located inside the case, on the printed circuit board. Push out the chassis as shown in the figure below. Plug crystals into the sockets on the printed circuit board. Plug Transmit(TX) crystals into TX sockets and Receiver(RX) crystals into RX sockets. Do NOT interchange or mix RX and TX crystals. Do always have a matched pair in the crystal sockets.

Order crystals from **h a n d i c**, stating channel number and frequency. **h a n d i c** is not responsible for poor operation when crystals of another manufacturer are used.

SELECTIVE CALL

Selective call 6 P DIN jack is provided on the back of the cabinet.

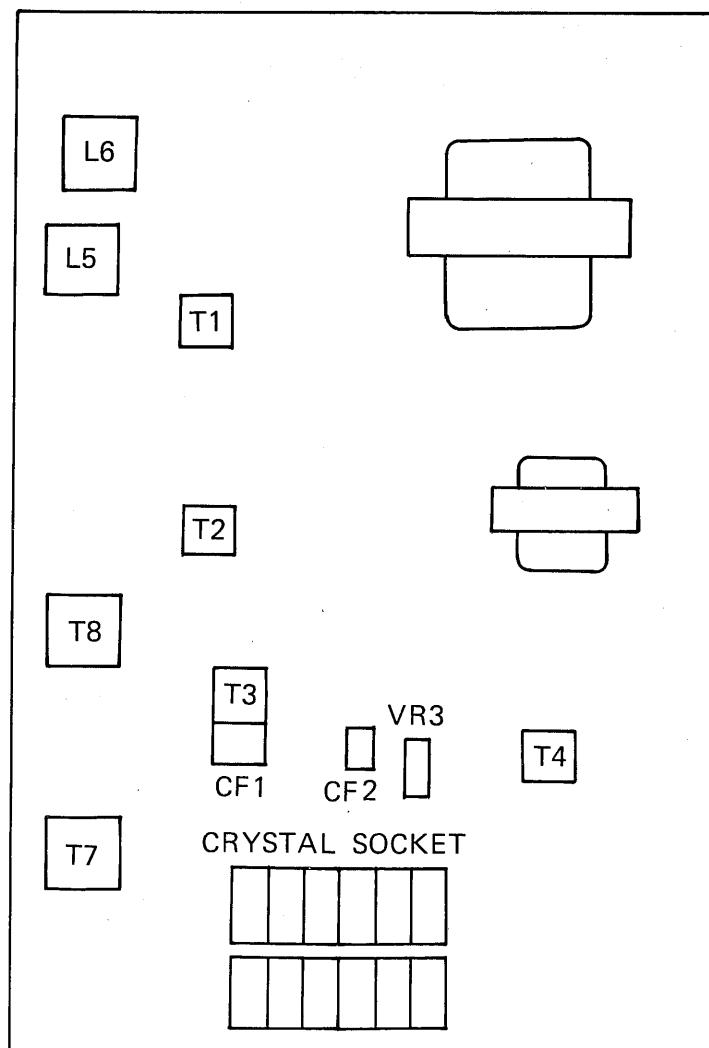

This jack is matched for **h a n d i c** S-10 and S-12 selective call units.
